

Amazon AWS II - Solution Architect

Student Name: Ayush Shah
Student ID: 10154670

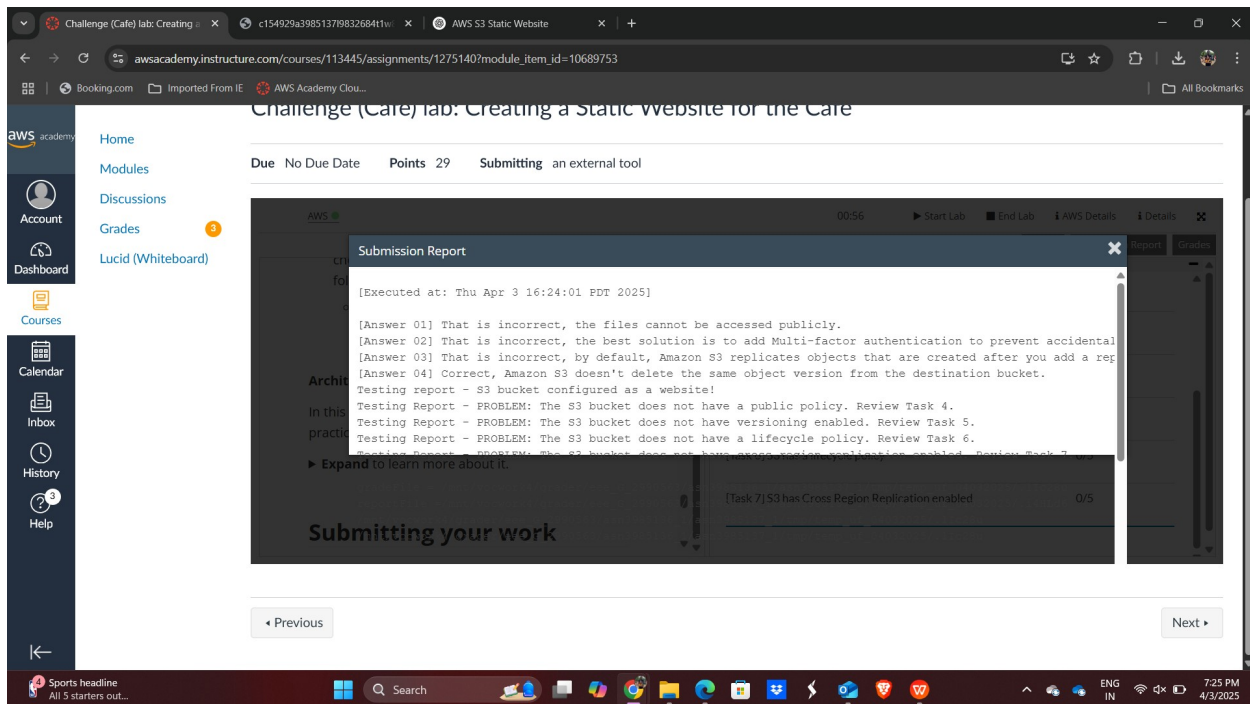

Term: Winter 2025

Challenge Lab Assignment (30 points)

In this assignment, you are required to complete following 5 challenge labs from the AWS Academy Cloud Architecting course. After you complete each lab, you need to capture a screenshot of the submission report and attach it under each section below.

This [Youtube video](#) explains how to capture the submission report. Please watch it before you start the assignment. This [github repo](#) includes links to the lab walkthrough videos that you might find helpful.

Challenge (Café) lab: Creating a Dynamic website for the Café

Due No Due Date Points 30 Submitting an external tool

Submission Report

[Executed at: Sat Apr 5 23:26:50 PDT 2025]

[Answer 01] Correct, the instance is running in a public subnet.

[Answer 02] Correct, the instance does have a public IP address assigned.

[Answer 03] Correct, only TCP port 22 is open, and only to a specific range of IP

[Answer 04] Correct, the EC2 instance does not have an IAM role attached.

[Task 3] SUCCESS! The web server instance's security group has port 80 open.

[Task 4] SUCCESS! The CafeRole has been attached to the EC2 instance.

[Answer 05] Correct, you have the option to not reboot when creating an AMI, but

[Answer 06] That is incorrect, You can edit the size and 'delete on termination'

[Answer 07] Correct, you can add more volumes to an AMI that you create from an

[Answer 04]

[Task 3] Web server SG en 5/5

Scenario

After the café launched the first version of its website, customers told the café staff how nice the website looks

Module 7 - Challenge Lab: Creating a VPC Networking Environment for the Café

The screenshot displays the AWS Academy interface for a challenge lab titled "Challenge (Cafe) lab: Creating a VPC Networking Environment for the Café". The interface includes a sidebar with navigation options like Home, Modules, Discussions, Grades, and Lucid (Whiteboard). The main content area shows the lab details, including a submission report window. The report lists six answers to questions, with the first five being correct and the sixth being incorrect. The final testing report states that the lab was completed successfully, with an internet gateway attached to the public subnet. The submission details on the right indicate a grade of 49 out of 56 points, submitted on April 6 at 3:26am.

Challenge (Cafe) lab: Creating a VPC Networking Environment for the Café

Due: No Due Date | Points: 56 | Submitting: an external tool

Submission Report

[Executed at: Sun Apr 6 0:27:08 PDT 2025]

[Answer 01] Correct, an internet gateway allows an instance in a public subnet to connect to the internet.
[Answer 02] Correct, the NAT Gateway allows an instance in a private subnet to connect to the internet.
[Answer 03] Correct, an instance in the private subnet can't be accessed directly from the internet.
[Answer 04] Correct, if a bastion host was compromised, the attacker couldn't use it to access the private subnet.
[Answer 05] That is incorrect. The current security group will prevent all traffic from the internet to the private subnet.
[Answer 06] That is incorrect. Security groups are stateful. Responses from the instance to the internet are allowed.

Testing report - The Public Subnet was created in Lab VPC.
Testing report - An internet gateway was attached to Lab VPC.
Testing report - Found a route table with an internet gateway attached.

Soni and Nikhil are now confident in their ability to create a two-tier architecture because of their experience migrating the café's data. They successfully moved from a MariaDB database on an Amazon Elastic Compute Cloud (Amazon EC2) instance to an Amazon Relational Database Service (Amazon RDS) database instance. In addition, they also moved their database resources from a public subnet to a private subnet.

Module 10 - Challenge Lab: Creating a Scalable and Highly Available Environment for the Café

The screenshot shows the AWS Academy interface. On the left is a sidebar with navigation links: Account, Dashboard, Courses, Calendar, Inbox, History, and Help. The main content area is titled "Submission Details" and shows the lab name "Challenge (Café) lab: Creating a Scalable and Highly Available Environment for the Café" submitted by jainee.patel@georgebrown.ca on Apr 6 at 10:56pm. The grade is 54.19 / 56. A "Submission Report" window is open, displaying a list of questions and answers, along with testing reports. The report includes details about port 80, internet gateway, NAT gateway, and the CafeWebAppServer instance. At the bottom of the report, there is a file path for the submission report.

Submission Report

[Executed at: Sun Apr 6 15:57:01 PDT 2025]

[Answer 01] Correct. Port 80 for HTTP is open.

[Answer 02] Correct. The public subnet has an internet gateway, so an instance with a public IP can access the internet through the NAT gateway.

[Answer 03] Correct. An instance in Private Subnet 1 can access the internet through the NAT gateway.

[Answer 04] Correct. An instance in Private Subnet 2 cannot access the internet because the subnet does not have a route to the internet gateway.

[Answer 05] That is incorrect. The CafeWebAppServer instance is in a private subnet without a route to the internet gateway.

[Answer 06] Correct. The AMI is named Cafe WebServer Image.

Testing report - The NAT gateway was found for Lab VPC.

Testing report - Launch template exists.

Testing report - Auto Scaling Group exists.

Testing Report - Load Balancer Found.

Testing Report - Cafe is reachable.

Challenge (Café) lab: Implementing a Serverless Architecture for the Café

jainee.patel@georgebrown.ca submitted Apr 6 at 8:47pm

Submission Report

[Executed at: Sun Apr 6 13:48:12 PDT 2025]

[Answer 01] Correct. The package folder is used to store any packages used by your script.

[Answer 02] Correct. The lambda needs to be able to communicate with the RDS instance.

[Answer 03] Correct. You could store the topicARN in SSM.

[Answer 04] Correct. You need to accept subscriptions before messages are delivered.

[Answer 05] Correct. You can use the logs in cloudwatch to look for errors.

Testing report - The Lambda security group exists.

Testing report - the salesAnalysisReportDataExtractor Lambda function exists!

Testing report - The salesAnalysisReport Lambda function exists!

Testing report - The SNS topic exists and is configured in the Lambda function.

Testing Report - Email subscription exists.
